Amendments to the Claims:

The listing of claims will replace all prior versions, and listings, of claims in the application:

5

Listing of Claims:

Claims 1-59 (cancelled)

10 60. (new) A system to assist the user of a wired phone which comprises:

a security panel that includes a connector to an associated phone line, a caller ID receiver and a first RF transceiver, said caller ID receiver cooperating with the associated phone line and said RF transmitter cooperating with said caller ID receiver to transmit caller ID information, said security panel further including an audio amplifier and a speaker coupled to said audio amplifier in addition to a microprocessor that formats messages sent by said first RF transceiver to said second RF transceiver and

20 a bracelet to be worn by an associated user that includes a second RF transceiver, said RF receiver cooperating with said first RF transceiver to access information provided by said first RF transceiver, said bracelet further including a display cooperating with said second RF transceiver to indicate to the user information regarding an incoming call on the associated phone line, said
25 bracelet further including at least one pushbutton cooperating with said second RF transceiver in said bracelet to produce a predetermined output from said second RF transceiver in said bracelet, said output of said second RF transceiver in said bracelet cooperating with said first RF transceiver in said security panel to produce a predetermined output to said microprocessor.

30

61. (new) A system in accordance with claim 60 wherein said predetermined output to said microprocessor causes the associated phone line to go off hook
- 5 62. (new) A system in accordance with claim 60 wherein said predetermined output to said microprocessor causes the associated phone line to go off hook and a predetermined message to be delivered to an individual placing an incoming call.
- 10 63. (new) A system in accordance with claim 60 wherein said predetermined output to said microprocessor causes the activation of said audio amplifier.
64. (new) A system in accordance with claim 60 wherein said bracelet further includes at least a second pushbutton cooperating with said RF transceiver in
15 said bracelet to produce a second predetermined output from said RF transceiver in said bracelet, said output of said RF transceiver in said bracelet cooperating with said RF transceiver in said security panel to produce a second predetermined output to said microprocessor.
- 20 65. (new) A system in accordance with claim 61 wherein said bracelet further includes at least a second pushbutton cooperating with said RF transceiver in said bracelet to produce a second predetermined output from said RF transceiver in said bracelet, said output of said RF transceiver in said bracelet cooperating
25 with said RF transceiver in said security panel to produce a second predetermined output to said microprocessor.
66. (new) A system in accordance with claim 60 wherein said second predetermined output to said microprocessor initiates a message to an incoming caller that the user will answer the call shortly.

30

67. (new)A system in accordance with claim 60 wherein said predetermined output to said microprocessor formats a predetermined voice message that is audible to a caller making an incoming call to the security panel.
- 5 68. (new)A system in accordance with claim 67 wherein the predetermined voice message that is audible to a caller making an incoming call to the security panel is a message that the end-user of the system needs additional time to reach the phone.
- 10 69. (new)A method to assist the user of a wired phone which comprises:
- connecting a security panel that includes a microprocessor to an associated phone line, providing apparatus that includes a caller ID receiver and a first RF transceiver, providing apparatus with a caller ID receiver cooperating with the
- 15 phone line and providing apparatus that includes providing a first RF transceiver cooperating with the caller ID receiver to transmit caller ID information, and
- providing a bracelet to be worn by an associated user that includes an RF transceiver that cooperates with the first RF transceiver, accessing information
- 20 provided by the first RF transceiver, and displaying to a user information regarding an incoming call on the associated phone line, providing an input in said bracelet that initiates an output from the bracelet that initiates a predetermined response in said security panel.
- 25 70. (new) A method in accordance with claim 69 wherein said predetermined response causes the associated phone line to go off hook.
71. (new) A method in accordance with claim 69 wherein said predetermined response causes the associated phone line to go off hook and a predetermined
- 30 message to be delivered to an individual placing an incoming call.

72. (new) A method in accordance with claim 69 wherein said predetermined response causes the delivery of a message to an incoming caller that the user will answer the call shortly.

- 5 73. (new) A method in accordance with claim 69 further including the step of utilizing the microprocessor to compare the caller ID number with an internal database to match it with the name.

74. (new) A system in accordance with claim 60 wherein said microprocessor
10 further match is the caller ID number with an internal database to match it with a number.
